Profile

DevOps & Cloud Engineer with hands-on experience in production Kubernetes environments (OpenShift & AWS EKS), GitOps automation using ArgoCD, CI/CD pipelines with GitHub Actions, and AWS cloud infrastructure. Experienced in deploying scalable, monitored, and highly available applications in enterprise environments.

Professional Experience

Devops Engineer, Keen and Able Pvt Ltd 06/2025 – Present
Client: Coredge – AWS EKS Production Environment (Current)

- Deploying containerized applications on AWS EKS clusters
- Implementing GitOps workflows using ArgoCD for automated deployments
- Creating CI/CD pipelines using GitHub Actions
- Managing Kubernetes deployments using Helm charts
- Setting up Prometheus for metrics collection and alerting
- Building Grafana dashboards for real-time monitoring of applications and cluster health

Client: KPMG - OpenShift Production Environment

- Deployed and managed multi-node Red Hat OpenShift cluster in production
- Configured OpenShift Virtualization for VM provisioning
- Implemented NGINX ingress and HAProxy-based load balancing
- Designed internal networking, storage classes, and ingress routing

OPEN SOURCE CONTRIBUTIONS

ArgoCD (CNCF Project), Merged PR #26876

- Added custom Lua health check for karpenter.sh/NodeClaim (Karpenter v1), enabling ArgoCD to accurately reflect individual node provisioning states. Previously, NodePool and EC2NodeClass had health checks but NodeClaim was missing, causing blind spots in node-level visibility.
- Implemented 4 health states: Progressing (node launching/registering), Healthy (Ready=True), Degraded (Ready=False, instance terminated), and Suspended (Disrupting=True — expired, consolidated, or drifted).
- Added 6 test cases covering all health states; PR reviewed and approved by core maintainers.

Education

B.E, Computer Science and Engineering specialization in DevOps, 07/2021 – 05/2025
Chandigarh University Mohali, Punjab, India
7.93 cgpa

Skills

Cloud AWS (EC2, IAM, VPC, EKS, S3, Route53)	Containerization Docker, Kubernetes, OpenShift Virtualization
Programming Python, Fast API, Javascript	DevOps Terraform, GitHub Actions, Linux, Load Balancing, NGINX, Helm, Argo CD, Prometheus, Grafana

Projects

Arc - Serverless PostgreSQL as a Service,

FastAPI, PostgreSQL, AWS EKS, Terraform, Next.js, PgBouncer, GitHub Actions

- Built a self-hosted, serverless PostgreSQL platform on AWS EKS.
- Implemented scale-to-zero using APScheduler, idle instances scaled to 0 replicas with PVC retained; auto-resume in ~15s on demand.
- Delivered PITR (WAL archiving to S3), PostgreSQL streaming read replicas, HMAC-SHA256 signed webhooks with exponential backoff retry, and per-instance CPU/memory metering every 60s.
- Provisioned entire AWS infrastructure (VPC, EKS, RDS, ECR) using Terraform modules; deployed Arc API with HPA (2–10 pods) and PodDisruptionBudget; CI/CD pipeline via GitHub Actions.

End-to-End DevOps Implementation - E-Commerce Application,,

AWS, Docker, Kubernetes, Terraform, ArgoCD, GitHub Actions

- Designed GitOps-based CI/CD system enabling reliable and automated production deployments.
- Automated creation of networking, compute, and cluster resources using Terraform improving scalability.
- Ensured secure routing, load balancing, and rolling updates using Kubernetes and Nginx ingress.
